

ISO 14001 Policy Statement

Sterling Engineering Corporation is committed to the preservation of the environment and compliance with all relevant environmental laws, regulations and other requirements. To that end, Sterling Engineering:

1. Operates its facility in compliance with all applicable environmental laws and regulations, and in a way that is protective of health and safety of its employees, surrounding communities and environment.
2. Strives to be a leader in improving environmental quality by minimizing waste and emissions, reusing and recycling, reducing the use of natural resources and promoting pollution prevention efforts throughout the Company.
3. Reviews its facility and programs on a regular basis and establishes goals for continuous improvement in the environmental arena.
4. Integrates environmental considerations into business planning and decisions, including procurement, production and facilities management.
5. Promotes a workplace in which all employees are properly trained to comply with applicable environmental laws and regulations, to meet environmental program goals and to take personal responsibility for protecting the environment.
6. Works with its customers in ascertaining and meeting their environmental needs and goals consistent with the Company's environmental compliance and management programs.
7. Implements a management system for environmental matters that is compliant with the most current revision of ISO14001.
